Uludag Bed Storage System

Installation Instructions-Frame Hole Map

Hole Map is valid for all frame dimensions

- It's highly recommended to follow the assembly instruction carefully and use the all included components on it's proper place.
- This mechanism has several static and dynamic balance factors according to basic hinge types. This is why selecting of correct product model is quite important. There are 4 main type according the total weight of frame and mattress. *Please don't hesitate to contact our customer support department destek@erhun.com.tr, 0..... if necessary.*
- Please use code generating steps which is shown on page #1 in order to get desired color and correct support bar length.
- In case of blockage of bed while opening remove the mattress, release the lock system manually and lift the bed.
- Don't use any abrasive material and or solvents on active arm body. Don't scratch or remove the paint.
- First opening may not proper works in order to gas flow in springs. Try to open and close 4-5 times to let the system balance itself.
- Try to keep mechanism from dust, humidity, soaps and water.
